

**Orion Diagnostica**

Remove the slide from the tube and compare the colony density with the model chart.  
Incubated at room temperature for 1-3 days or sent to a laboratory for hours. The tube may also be incubated at +36 ± 2 °C for 16-24 hours.

Insert the slide back into the tube and place the tube in an upright position inside an incubator and let the excess urine drain from the slide and blot the last drops on absorbent paper.

Pour the urine sample onto the slide or dip the slide in the urine sample so that both agar surfaces become completely wet.

## Test Procedure

- Uricult® Trio
- Uricult® Plus
- Uricult®

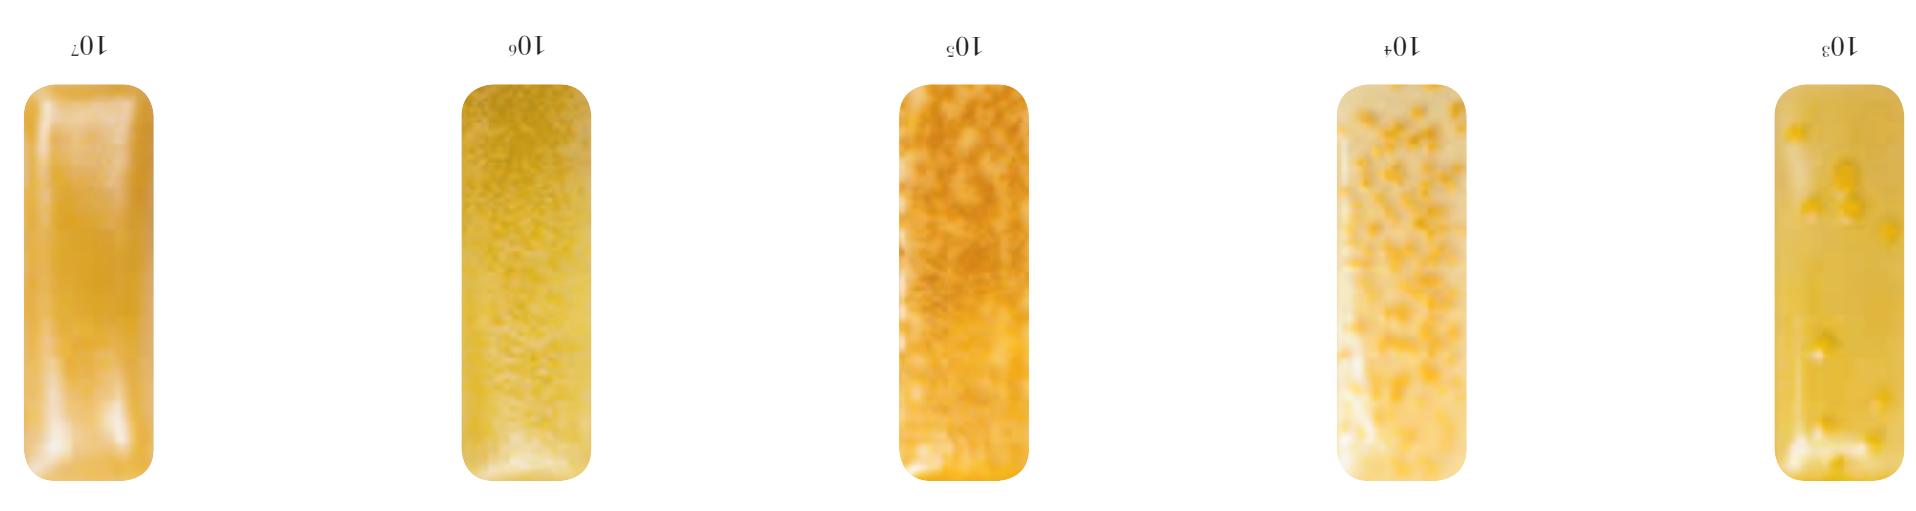

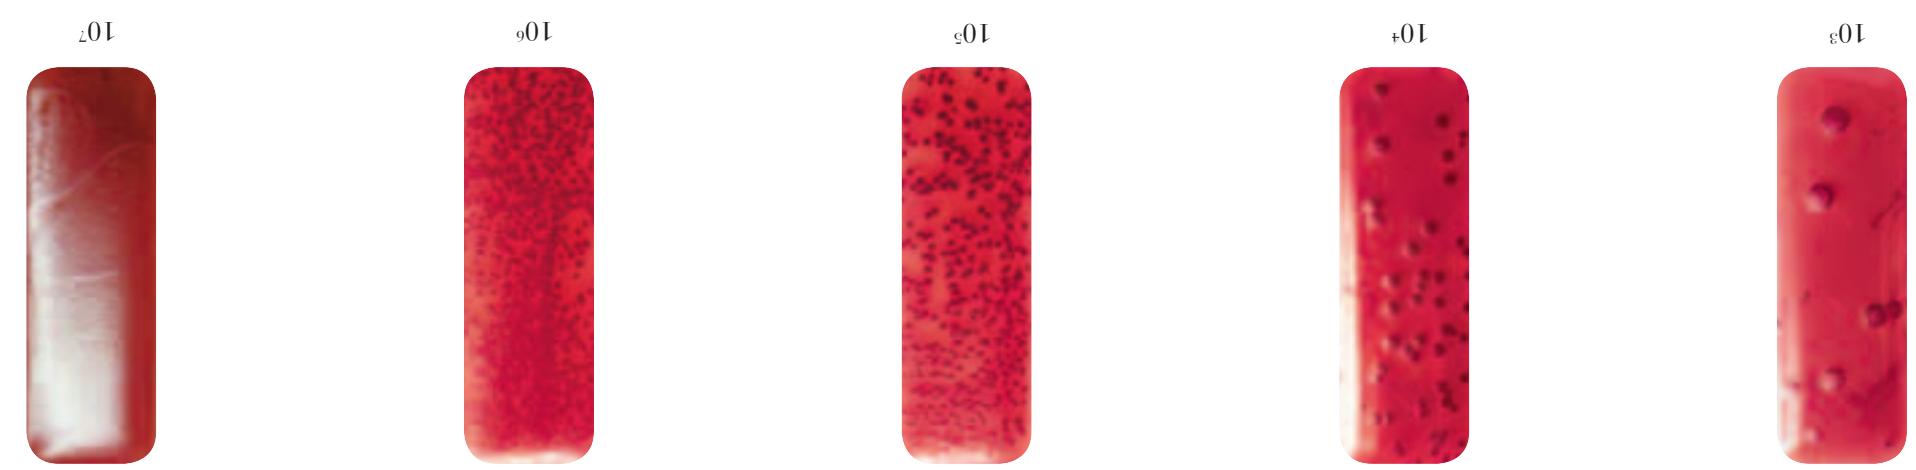

- Cat. No. 67404  
gram-negative bacteria
- the MacConkey medium is selective for almost all bacteria that cause urinary tract infections grow on the CLED medium
- for detection of enterococci
- CLED/MacConkey + an agar medium specific for enterococci
- CLED/MacConkey agar media
- for detection of urinary tract infections
- Uricult® specially developed for detection of enterococci
- Uricult® CLED/MacConkey + E. coli agar medium
- E. coli bacteria produce big beta-D-glucuronidase enzyme colonies on the CLED/MacConkey + E. coli agar medium
- as dark colonies on the E. coli agar medium
- Uricult® specifically developed for detection of E. coli
- Cat. No. 67465  
the enterococcus-specific agar medium
- Uricult® Plus
- Uricult®

# Uricult®

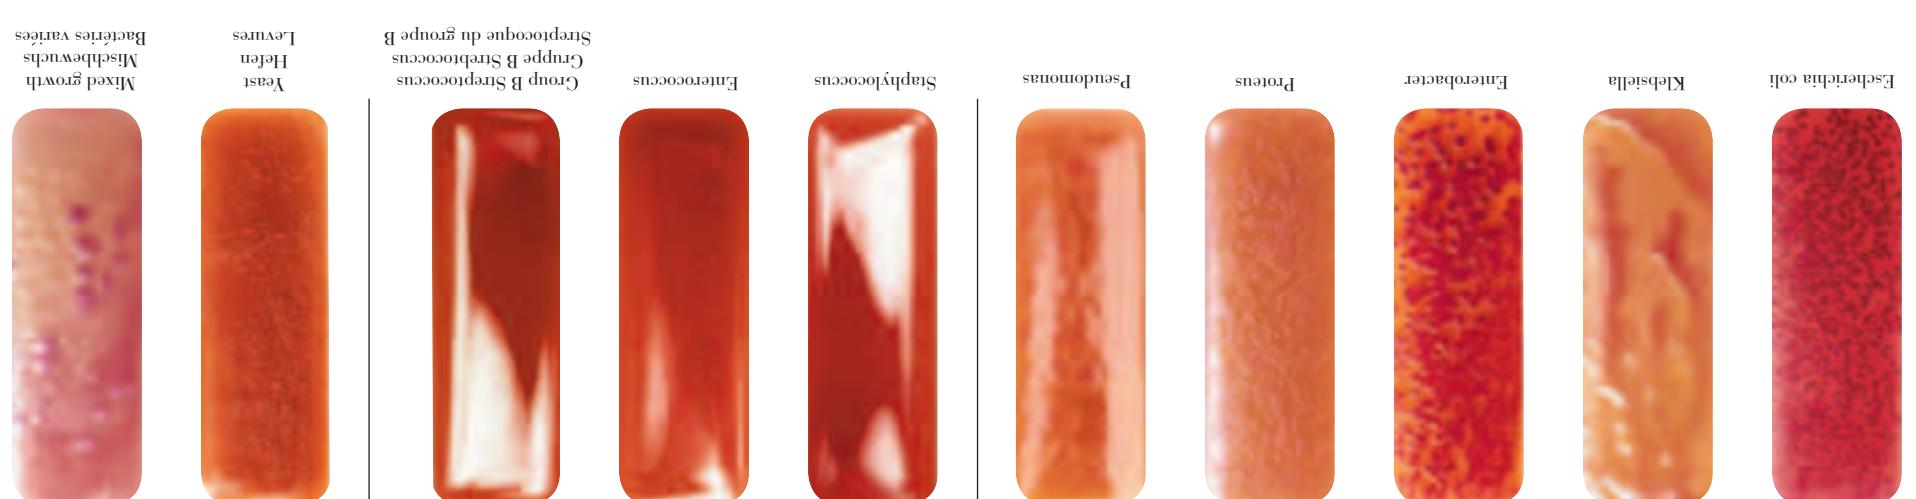

## Model Chart

**Orion Diagnostica**

E. coli colony densities / Kolonienendichte / Densité des colonies

#### Gram-positive bacteria

Organisms on media / Organismen auf Nährmedien / Organismes sur milieux

#### Gram-negative bacteria
